FOR IMMEDIATE RELEASE

CTN Unveils the OxyPro VH2 Two-Seat Hyperbaric Chamber in Global Premiere at Beyond Activ Americas 2026

Finnish-engineered mild hyperbaric chamber debuts at a 7:40 a.m. CT press conference on Nov. 12 at CTN Booth #401, Hilton Anatole, Dallas. Pre-orders open now, exclusively through CTN, with units delivered on a first-come, first-delivered basis.

DALLAS and JACKSONVILLE, Fla., Nov. 2, 2026, 8:00 a.m. ET – CTN USA, the U.S. arm of Finnish wellness-technology company Cryotech Nordic (CTN), today announced the global premiere of the OxyPro™ VH2, a modular, two-seat mild hyperbaric chamber with an integrated oxygen generator and a lounge-style interior. CTN will unveil the OxyPro VH2 at a press conference at 7:40 a.m. CT on Thursday, November 12, before the show floor opens at Beyond Activ Americas 2026, at CTN Booth #401 in the Trinity Exhibition Hall at the Hilton Anatole in Dallas. Pre-orders open today, exclusively through CTN, and units will be delivered on a first-come, first-delivered basis.

Hyperbaric sessions don't have to be a solo experience. The OxyPro VH2 brings a two-seat layout to the chamber experience: a private, lounge-style interior where two people recline side by side so teams, fitness clubs, spas and recovery studios can double session capacity and offer a premium lounge-style experience. CTN is a Platinum Partner of Beyond Activ Americas, which takes place November 12–13, 2026, and connects operators and investors across fitness, wellness, hospitality and longevity.

What sets the OxyPro VH2 apart

- **Two seats, two electric recliners.** Two guests relax side by side in individual electric recliners, doubling capacity per session compared with single-person chambers.
- **On-board oxygen generator.** The integrated generator supplies oxygen without external oxygen tanks to order, store or swap. Generator output is 93% ± 3% oxygen at 20 L/min.
- **Adjustable chamber pressure.** Operators can select pressure settings up to 1.5 ATA within the manufacturer's specified operating range.
- **Dual touchscreen control.** Touchscreens inside and outside the chamber provide access to designated session functions, and an intercom keeps guests and staff in contact. Operation and supervision follow the manufacturer's instructions.
- **Pressure-control features.** The chamber is built from pressure-grade steel and has dual automatic pressure-relief valves and dual manual emergency valves.

- **Lounge-grade interior.** Inside are diamond-quilted eco-leather upholstery, hardwood flooring, 24V dual-color LED accent lighting, a flush-mounted display and climate control.
- **Compact footprint.** The chamber measures approximately 2.2 × 1.8 m (about 7.2 × 5.9 ft), and its companion compressor unit draws 3,300 W.
- **Engineered in Finland, supported in the U.S.** CTN designs and engineers OxyPro in Finland, and CTN USA provides factory-direct service, parts and support from Jacksonville, FL.

A shared chamber experience

OxyPro VH2 offers athletes, active adults and wellness-focused guests a shared chamber experience in a lounge-style setting. During a session, chamber pressure increases to the selected setting while the integrated system supplies oxygen according to the model's operating instructions. Two individual electric recliners, adjustable lighting and climate control create a space to sit back and take a break from the day.

Individual experiences vary. Sessions should follow the manufacturer's instructions for the specific model, including screening, operation and supervision requirements.

"Fitness, sport and hospitality are about bringing people together, and we wanted to bring that same idea to the hyperbaric chamber experience," said Dave Hein, Partner, CTN USA. "The OxyPro VH2 is a private, two-seat, lounge-style chamber with its own oxygen generator. Operators can offer a shared, premium experience without managing external oxygen tanks. We're premiering it in Dallas because Beyond Activ Americas puts the right operators and investors in one room. We're opening pre-orders today, and units will be allocated strictly in the order they're reserved."

Press conference: media and industry invited

Media, analysts and industry professionals are invited to attend the press conference, see the OxyPro VH2 up close, and request interviews with CTN leadership or a guided walkthrough of the chamber before the show opens to attendees.
